

ELECTRONIC ENCLOSURES

ROSE Systemtechnik GmbH

The company was founded in 1969 and specializes in the development and production of high quality industrial enclosures, which are used in a variety of environmental conditions.

Phoenix Mecano AG / Switzerland is a global company.

The basis of our business success are systems from a wide range of high quality products, innovative design and first class customer service.

Technical modifications reserve!

Multitronic

- EMC Aluminium enclosure system for MCR technology
- Integrated guide grooves for PCB's
- External mounting slots with spring nuts

Technical data

Material:

DIN EN 573 EN AW-AlMgSi

Ingress protection:

IP 40 to EN 60529

Painting:

Powder coating

Colour:

RAL 9005, jet black

Temperature range:

-40°C to +100°C

Included in delivery

Enclosure with two aluminium lids, screwed.

Multitronic

NoVoTronic 19

- Variable possibility to combine connection compartment and profile
- 2 enclosure sizes 28HP and 42HP
- Rack for 19" inserts (height 3RU)
- Optional with transparent cover
- Variable length by profile technic

Technical data

Material:

Enclosure profile: DIN EN 573 EN AW-AlMgSi

Connection compartment:

DIN EN 1706 EN AC-AlSi 12 (Fe)

Ingress protection:

IP 65 to EN 60529

Outdoor application on request

Painting:

Powder coating

Colour:

RAL 7043, traffic grey B

EMC:

Optional EMC version

Temperature range:

Seal: -40°C to +90°C

Transparent cover: -40°C to +60°C

Included in delivery

Enclosure system - depending on version either with connection compartment, swivel intermediate frame, profile and screwed lid.

Applications Profitronic 19 / Profitronic 19U

Profitronic 19 / Profitronic 19 universal

- Enclosure in variable length version using profile technology
- Standard construction or version with connection compartment
- Optional Polycarbonate transparent cover
- Profitronic 19: integrated 19" rack (height 3HU): 19, 28, 42HP
- Profitronic 19 U: aluminium electronic enclosures in 3 sizes

Technical data

Material:

Enclosure body: DIN EN 573 EN AW-ALMgSi

Connection compartment:

DIN EN 1706 EN AC-ALSi 12 (Fe)

Ingress protection:

IP 65 to EN 60529

outdoor application on request

Colour:

Enclosure body and connection compartment:
RAL 7035, light grey

Enclosure lid and external bracket:
RAL 7030, stone grey

Painting:

Powder coating

Opening angle:

Connection compartment and transparent cover
110°

Temperature range:

Lid seal: -40°C to +80°C

Transparent cover: -40°C to +70°C

Included in delivery

Enclosure system - depending on version either with cast aluminium lids, connection compartment or transparent cover, fixing elements please order separately

Profitronic 19 / Profitronic 19 universal

Technical data

Material:

Enclosure body: DIN EN 573 EN AW-AlMgSi

Sides: diecast aluminium

Ingress protection:

IP 65 to EN 60529

Colour:

RAL 7035, light grey

Painting:

Powder coating

Temperature range:

-40°C to +80°C

Included in delivery

Enclosure system with 2 cast aluminium lids and front plate screwed

Pult-Profitronic

Product range

Type	Order No.	External enclosure dimensions* W x L x H (mm)	max. PCB dimensions (mm)	Weight (g)
07.04	07.04 14 24	201 x 241 x 121/47,5	100 / 189	3200
	07.04 14 36	201 x 362 x 121/47,5	100 / 189	4860
	07.04 14 48	201 x 483 x 121/47,5	100 / 189	6480

EMC version: product group 70.xx xx xx

Accessories

Clamps (10 pcs.)	07.83 00 00
------------------	-------------

07.83 00 00

Dimensions

Order No.	Dimensions	
	A	B
07.04 14 24	211,5	241,5
07.04 14 36	332,5	362,5
07.04 14 48	453,5	483,5

- Aluminium desktop enclosure for MCR technology
- Individual height versions by profile technology
- Stacking capability using special foot shape
- Contact-uninsulated internal enclosure walls
- Internal groove for spring nuts M4 and M5

Technical data

Material:

Half shell: DIN EN 1706 EN AC-AISI 12 (Fe)

Profile: DIN EN 573 EN AW-ALMgSi

Ingress protection:

IP 40 to EN 60529

Colour combination:

Enclosure: RAL 7035, light grey
Foot elements: RAL 7024, graphite grey

or enclosure: RAL 9005, jet black
Foot elements: RAL 3003, ruby red

Painting:

Powder coating

Temperature range:

-40°C to +80°C

Included in delivery

Enclosure system with foot/head elements,
front plate/rear wall please order separately

Applications

General technical informations

The way to the right enclosure

Various criteria must be taken into account when selecting an enclosure:

- the fitting location (internal or external use, explosion zone, sea-water use etc.)
- the size (depends on the contents)
- the protective functions (ingress protection, EMC toughness, Ex)

The listings below should help you to select the right enclosure to match your special requirements.

I. Enclosure material specifications

Aluminium enclosures

- Light, robust metal enclosures
- good chemical resistance (see table)
- can be used in large temperature range
- EMC basic screening (complete screening optional)
- good finishing options
- application areas: suitable for internal and external use, special version or Ex version for use in aggressive or sea-water environments

II. Temperature range

The definition of temperature resistance for enclosures is based on the maximum continuous temperature at which the enclosure remains dimensionally stable and the ingress protection remains guaranteed. Admissible short term peak temperatures are often considerably higher. The definition of temperature resistance in the case of the components of the process automation is based to the maximum continuous temperature, provided that the factory-installed (electronic) components are functioning correctly and the enclosure rating is maintained. Further classifications apply to storage and transport, and are listed in the respective product descriptions.

III. Corrosion resistance

We offer the following for critical external areas:

SWB version (seawater-resistant):

Purified - powder-coated

Standard colour RAL 5009, other colours on request.

For application areas with extreme UV radiation we recommend coating with a special Polyester powder.

SBG/SBGL version only for wet painting processes.

SBG = washed - chromated - priming

SBGL = washed - chromated - priming - painting

Stainless steel socket inserts available on request.

IV. Ingress protection

ROSE enclosures are classified in ingress protection to the generally applicable guidelines contained in EN 60529 and IEC 144.

The ingress protection is indicated by an abbreviation, which is always composed of the two letters IP and two digits relating to the protection level.

Protection class for contact and foreign body protection

First digit	Designation
0	No protection
1	Protection against large foreign bodies
2	Protection against medium-sized foreign bodies
3	Protection against small foreign bodies
4	Protection against grain-shaped foreign bodies
5	Protection against dust deposits
6	Protection against dust entry

Protection class for water protection

Second digit	Designation
0	No protection
1	Protection against vertical falling drip water
2	Protection against obliquely falling drip water
3	Protection against water spray
4	Protection against splashing water
5	Protection against water jets
6	Protection when flooded
7	Protection when immersed
8	Protection when submerged

Hinweis: Die bei den Gehäusen angegebenen Schutzarten beziehen sich auf unbearbeitete Gehäuse im Auslieferungszustand. Alterung und Temperaturschwankungen können zu einer Minderung der Schutzart führen.

General technical informations

EMC in enclosure technology

General information

In electrical/electronic engineering, enclosures assume two tasks:

- protection of the installed components from mechanical hazards and adverse radiation from outside
- protection of the surroundings from occurring mechanical and electrical hazards and adverse interference radiation from the components installed

Especially the electromagnetic compatibility (EMC) has an increasing effect on the selection of enclosures because of the ongoing development of the electronic components and the increased equipment density on the PCB's - which increasingly generates „pollution“ by electromagnetic interference radiation in the environment.

Legal regulations

Within the framework of harmonising the European standards, an EC guideline directive (05.89/336/EEC) was passed in May 1989, which took effect in the Federal Republic of Germany on the 9th Nov. 1992 in the EMC law (EMVG). This law is applicable to all units which might cause electromagnetic interference or the operation of which could be impaired by such interference. The EMC directive came into effect on 1.1.1996 EC-wide - from which date all new electrical and electronic units brought into circulation within the EC had to fulfil these regulations. As an external sign that the EC relevant laws (EMC law and further design basics), these units have to show the CE symbol.

Requirements from the enclosure

Enclosures as such are not subjected to the EMC law, as by definition they are not electrical or electronic units. However, enclosures are to a large extent responsible for the intensity of interference emission (receipt and transmission of interference waves) of a unit. At this point, the choice of the enclosure material is also decisive for the screening effect which is composed of a reflection and an absorption damping of a enclosure.

Synthetic materials (plastics) alone have no filtering effect on interference radiation. A screening effect can be achieved by additional costly treatment (metal flashing or application of a conductive lacquer).

Metal enclosures, on the other hand, offer a highly effective basic protection against interference radiation. (Here an important factor is a large contact surface of the individual components of the enclosure (cover, enclosure shells).

To meet special protection requirements, the EMC compatibility can be increased by

- conductive seals,
- contact bare front surfaces as well as
- EMC compatible cable screw connections.
